Since the first days of using the Internet, users around the world have used it to share files with each other. Home users sometimes find this a cheap way to share media such as music, video and software. File sharing wasn't so widespread when it meant competing for modem connections and then waiting hours to download a large file just to get one, short, poorly pixelated video. Now, you are more likely to connect your home computer to a fast, reliable Internet connection, and have plenty of hard drive space available. With these two ingredients, you can share even the biggest video files, including high quality TV shows and feature films. As online file sharing has grown, media organizations around the world are constantly working against piracy of copyrighted material. However, for every file-intensive Internet site that was forced to close due to copyright infringements, much more was launched in its place. With the number of Internet users also continuing to grow, confidence has grown among file-sharing enthusiasts that little laws can do to stop them from sharing all types of media. This confidence is reflected in the name of one of these websites: Pirate Bay. The Pirate Bay ad tracks files that can be downloaded using BitTorrent, a widely used standard for file sharing over the Internet. Pirate Bay is free for personal use, and it claims to set itself apart, providing content not only for free but also censorship. Site administrators ask you for only a few things: take responsibility for the content you share, refrain from sharing malicious and illegal content, and not use the tracker in a way that violates the privacy of other users. Pirate Bay does not provide any service guarantees and reserves the right to publish any information about violations of its use policy. This article covers how to use The Pirate Bay to share files online, and describes the site's history and legal problems. What does The Pirate Bay have in common with Apple, Amazon, Netflix, Disney, HBO and Hulu? Streaming service. Yes, the notorious torrent platform is a test of a new feature that allows you to stream high-quality video directly from the browser, as noted by TorrentFreak. This is what the new 'B' icon is under the torrent of records for, in case you're wondering. By clicking on it, you can upload content to a new site called BayStream without downloading it. Credit: TorrentFreak At the moment, the service is pretty spotty - especially when used through a Pirate Bay proxy. Icon B is broken in proxy sites (instead, you'll see text play and - from the views of it - so streaming implementation. The service still works perfectly through some proxies, but you may have to dig in. When it works, however, things seem to load quickly and there are hardly any delays. This is despite the fact that the content appears to be the source of the torrent torrent As TorrentFreak notes, it was not immediately clear whether the Pirate Bay streaming was controlled or by outsiders. Be that as it may, this is not the first time a torrent platform has experimented with streaming. Back in 2016, the site briefly allowed content to be streamed directly into your browser through Torrents Time integration. It will be interesting to see if the streaming platform attracts many users, especially if Pirate Bay (or whoever runs it) prefers to keep it around. Some studies have previously shown that one of the negative effects of multiple streaming exclusives is a blow to piracy. Who would have thought people would turn to piracy instead of adding another monthly subscription just so they could admire Baby Yoda? Shocking. From the pirate bay homepage, just enter the search criteria and click either the Pirate Search or Google-like option I feel happy with. Use links and checkboxes to view available torrents in some popular categories. If you're new to using BitTorrent, click How can I download it? to learn useful information about setting up a BitTorrent client on your home computer. As described in How BitTorrent Works, your BitTorrent client connects to a tracker (in this case a Pirate Bay tracker) that contains torrent files. These torrent files will help you find nodes that have the file you're looking for. When you start downloading a file, you can watch you interact with other peers in your swarm using features in your BitTorrent client. When the download is complete, you can continue to be a seeder (providing all parts of the file), or you can stay leecher (downloading the file but not giving the file to others after downloading). To help you when choosing a torrent to download, The Pirate Bay shows the number of seeders and leechers that exist around the same time that you did your search. Advertising What if your band wants to share their new single with Pirate Bay users, or you want to publish your book as a free download? You can do this, too, by becoming a member of Pirate Bay. Click the Sign up button from the homepage, fill out the form and confirm your registration via email. Then log in to Pirate Bay and click on the Upload torrent link at the bottom of the page. You can add a torrent in two ways: use this web form directly or use the Announce URL shown in the torrent option in your BitTorrent client. When you torrent, the client downloads the torrent file to the tracker and you can make yourself available as a propa image for that file. Only registered Pirate Bay users have access to adult content (pornography). If the category is activated in personal preferences, he or she will be able to access adult videos in his or her search results, and becomes a search category from the homepage. This material is not censored, but some users report that child pornography is not allowed and all materials are to be removed in accordance with the use policy. If you are sensitive to adult materials or other possible search results, be careful when looking for downloads in Pirate Bay. Pirate Bay has a great online community in its forum and its Internet Relay Chat (IRC) channel. The SuprBay Forum, accessing the Forum link on the homepage, includes discussion of various file-sharing topics, news and announcements about Pirate Bay, as well as tutorials to help new users and answer frequently asked questions. The IRC channel (#thepiratebay.org) takes place in irc.efnet.net, and offers you a real-time chat with playful, eager to help users who take a lot of pride in Pirate Bay. It consistently ranks in the top 350 on Alexa. 2. 1337x.to 1337x is one of the most well-designed alternatives to The Pirate Bay; You can easily filter different types of torrent files with a button at the bottom of the screen. Torlock also claims to offer a strict privacy policy. Developers don't record your actions or track you all over the Internet. The same can not necessarily be said about other torrent download sites. The destruction of the site began in 2016 after U.S. authorities seized the domain, but it has since risen from the ashes. Although the torrent file library in the site index has shrunk from its peak, KickassTorrents remains a trusted site that is easy to navigate and download the files you need. 6. Like the YIFY group, ESTV has created torrent files and made them available on other popular torrent sites. When KickassTorrents faced legal difficulties, EzTV decided to take the operation to their homes and launched its own alternative to The Pirate Bay. In terms of design, the site is not as easy to use as some of its competitors: it is the quality and variety of torrents that keeps people coming back. 10.
